- Questions

# Background

Background

Geophysical Scope

ENSAFE

- Historic release of petroleum hydrocarbons from leaking underground storage tank system at a former convenience store/gas station
- UST Pit reportedly straddled a mapped geologic fault zone
- EnSafe conducts initial investigation, establish preliminary conceptual site model
- Traditional boring and sampling techniques yield significant data gaps
- Conceptual site model needs refined for effective corrective action remediation

**Regional Geology** 

**Results** 

**Previous Work** 

Questions

# **Regional Geology**

- Mississippian (or Pennyroyal) Plateau Region –
  Hilly uplands, SS ridges over LS, cut by many normal faults
- Rough Creek Fault System (northern boundary of Rough Creek Graben) – three major tectonic episodes
  - 1. Normal faulting during the Precambrian (Reelfoot Rift),
  - 2. Reverse faulting in late Paleozoic, and
  - 3. Normal faulting in Mesazoic.

**Results** 

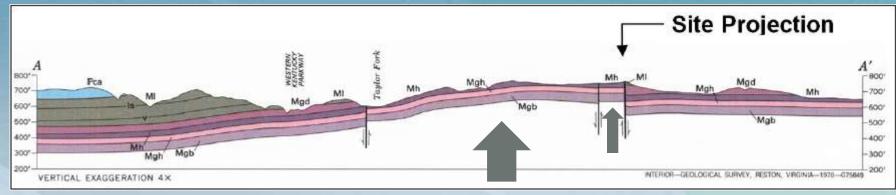

**Regional Geologic Context** 

#### Geologic Cross-Section from Leitchfield 7.5' Quadrangle map (from Gildersleeve, 1978).

# **Regional Geology**

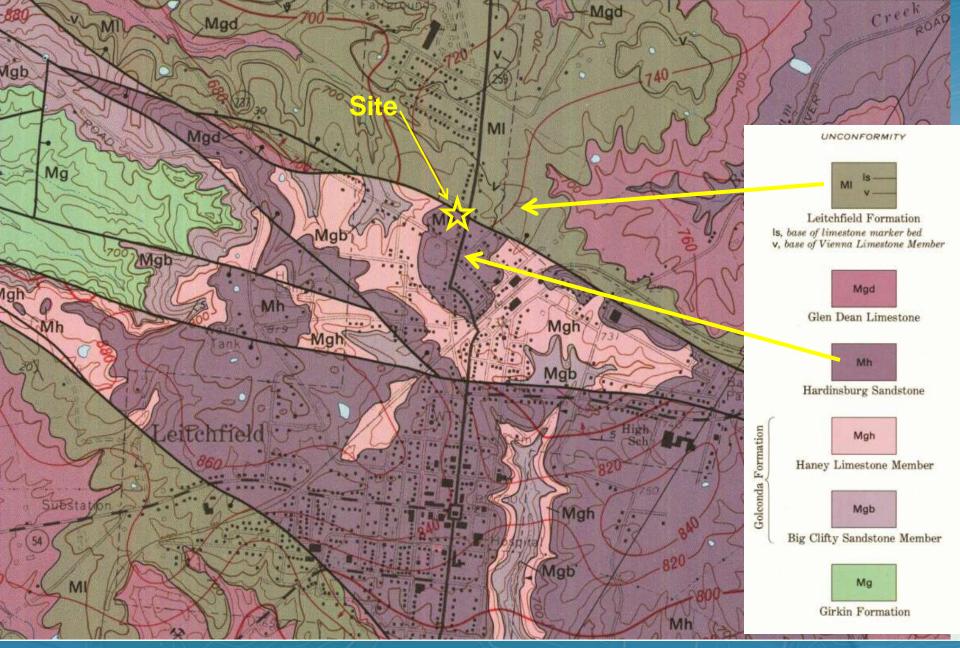

- Uplift of graben brought Late-Mississippian to surface
- Leitchfield Formation, MI, on north side of fault
- Hardinsburg Sandstone, Mh, on south side.
- Haney Limestone member of Golconda Formation, Mgh,
  contact is mapped within a few hundred feet of site so
  Hardinsburg may be thin.
- *Tar sands* occur in Tar Spring, Hardinsburg, and Big Clifty
  Big Clifty is locally *asphaltic* near base

ENSAFE

Background Geophysical Scope

**Regional Geology Results** 

# **Previous Work**

- EnSafe working at Site Since 2008
- Kentucky DEP-UST Branch directing efforts
- To date, 21 monitoring wells, 2 recovery wells and 6 core holes have been completed
- Preliminary interpretation of fault nature and location
- Intense bedrock fracturing and brecciation zone are present within and near the mapped fault trace

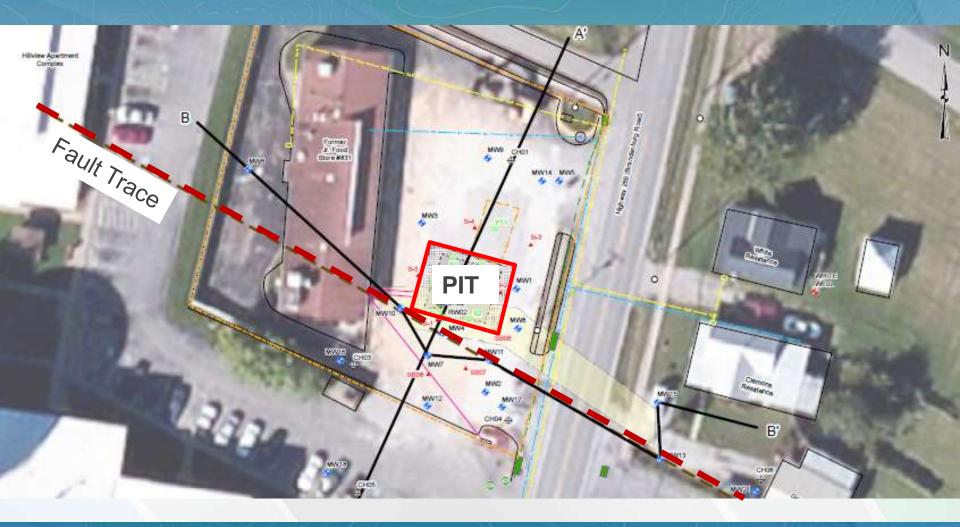

ENSAFE

Regional Geology Results

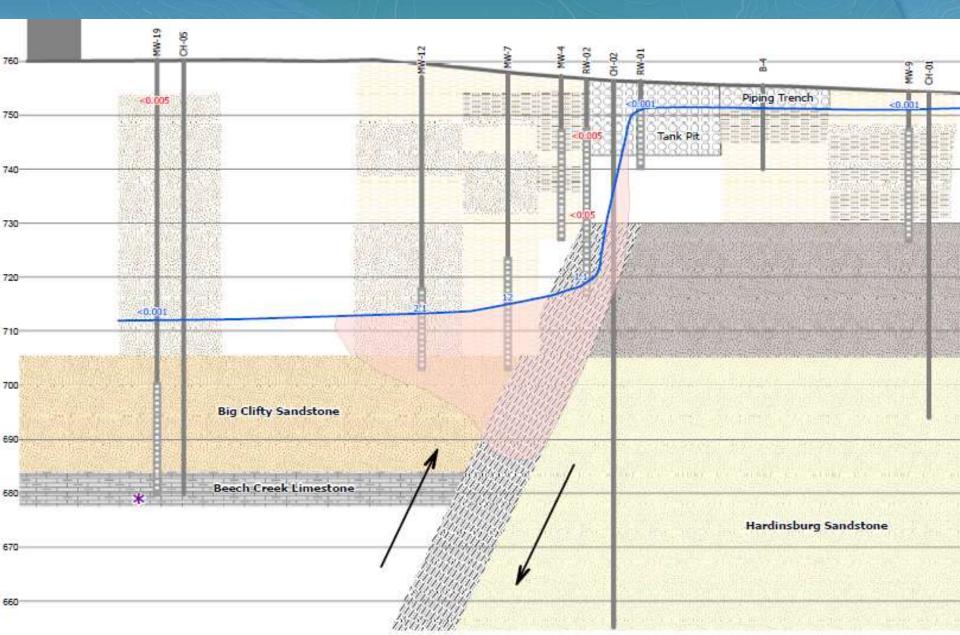

# **Preliminary Map**

Background **ENSAFE** 

**Regional Geology** Geophysical Scope **Results** 

# **Preliminary Profile**

# **Geophysical Scope**

- Image the lateral and vertical extent of soil, bedrock, groundwater and subsurface features influencing potential groundwater impact movement.
- Desktop Study Review completed work and published/information on the local geology and fault mapping that has occurred in the area, includes limited photo lineament and LiDAR analyses.

Regional Geology

Results

**Previous Work** 

Questions

- Electromagnetic terrain conductivity mapping
- Two Dimensional Electrical Resistivity Imaging
- Seismic microtremor analysis shear wave profiling
- Very low frequency electromagnetics

Background

Geophysical Scope

ENSAFE

#### **Regional data review**

Terrain conductivity data covering site

9 resistivity profiles of varying lengths, electrode spacing

6 seismic profiles, colocated with select resistivity profiles

6 VLF profiles, co-located with select profiles

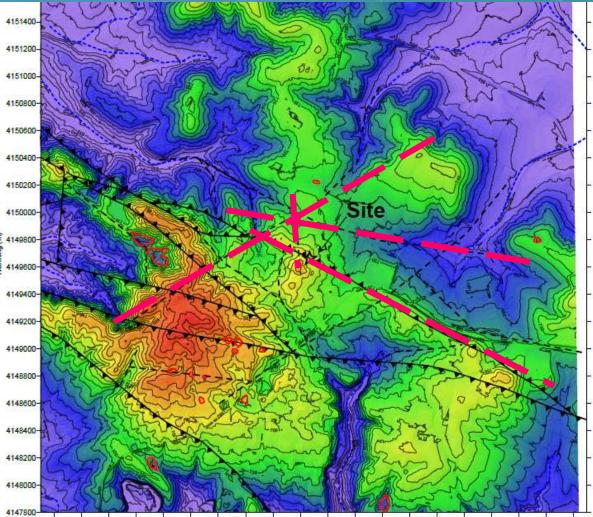

ENSAFE

Background R Geophysical Scope

Regional Geology Results

# Results

Aerial photo and LiDAR data analysis for lineaments yielded additional fault/fracture traces not indicated in the geologic quadrangle.

#### **Primary Fault Orientation**

Multiple orientations of minor faults, en-echelon
